

## Connecting Real-time Healthcare Data with Need

Healthcare providers need a comprehensive patient view to deliver better quality care...often data captured and residing in multiple unconnected systems.

Facilitate and accelerate your interoperability goals with V12 Connect™, a new middleware engine from Virsys12 that empowers you to seamlessly exchange and integrate the data you need in Salesforce and other database systems. V12 Connect provides **pre-built templates** for essential health data - efficiently transferring unstructured and structured data in all formats meeting HL7 standards, including the recent HL7 FHIR (Fast Healthcare Interoperability Resources).

Our flexible API interface engine accesses needed data from previously inaccessible electronic health records (EHRs) *including 3rd party data they contain*, electronic medical records (EMRs), insurance claims, lab records and more.

- Pre-built connections/templates (see list at right)
- HIPAA compliant, cloud-based and on-premise versions
- Integration that is faster, more efficient, costs less

V12 Connect, powered by Trinisys®, brings data in all its forms directly into a “single source of truth” on the Salesforce platform. Pre-built templates assure data quality, security and speed. V12 Connect simplifies technology so you can focus on healthcare.

### Data Standards & Formats

- HL7 (all versions)
- FHIR 
- EDI
- ASCII (RAW OR BINARY)
- HTML5
- TIFF, JPEG, BMP, PNG, GIF
- PDF
- Delimited Text
- XML
- Flat file
- CDA
- RTF / Word
- CSV, XLS
- More

**Virsys12** is an award-winning Salesforce Consulting Partner focused on healthcare innovation nationwide. Guided by a leadership team with over 75 years of executive success, the individually certified team maintains top customer satisfaction ratings and excels in lean business process. We solve your hardest problems by making the complex simple, guaranteeing our work for operational platform implementation, integrations and custom applications.
